SECTION 8 : EXPOSURE CONTROLS/PERSONAL PROTECTION

8.1 CONTROL PARAMETERS

mtr

If a product contains ingredients with exposure limits, may be necessary a personnel monitoring, work place or biological, to determine the effectiveness of the ventilation or other control measures and/or the necessity to use respiratory protective equipment. Reference should be made to EN689, EN14042 and EN482 standard concerning methods for assessing the exposure by inhalation to chemical agents, and exposure to chemical and biological agents. Reference should be also made to national guidance documents for methods for the determination of dangerous substances.

OCCUPATIONAL EXPOSURE LIMIT VALUES (TLV)

				1		
AGCIH 2014	<u>Year</u>	TLV-TWA		TLV-STEL		Remarks
		ppm	mg/m3	ppm	mg/m3	
n-butyl acetate	1998	150.	713.	200.	950.	
Ethylacetate	1996	400.	1440.	-	-	
Butane	2004	1000.	-	-	-	
Propane	2004	1000.	-	-	-	
Isobutane	2004	1000.	-	-	-	
2-methoxy-1-methylethyl acetate		50.	275.	100.	550.	Vd
						Recommended
Butan-1-ol	2002	20.	61.	-	-	

TLV - Threshold Limit Value, TWA - Time Weighted Average, STEL - Short Term Exposure Limit. Vd - Dermal.

Dermal (Vd): Means that, in exposures to this substance, the contribution by the cutaneous route, including the mucous membranes and eyes, may result significant for the overall body content if no measures are taken to prevent absorption. There are some chenicals for which dermal absorption, both in liquid and vapour phases, can be very high, and this route of entry may be or equal or greater importance even that inhalation pathway. In these situations, the use of a biological control is essential in order to quantify the overall amount of contaminant absorbed.

BIOLOGICAL LIMIT VALUES: Not stablished

DERIVED NO-EFFECT LEVEL (DNEL):

Derived no-effect level (DNEL) is a level of exposure that is considered safe, derived from toxicity data according to specific guidances included in REACH. DNEL values may differ from a occupational exposure limit (OEL) for the same chemical. OEL values may come recommended by a particular company, a government regulatory agency or an organization of experts. Although considered protective of health, the OEL values are derived by a process different of REACH.

Derived no-effect level, workers: - Systemic effects, acute and chronic: n-butyl acetate Ethyl acetate 2-methoxy-1-methylethyl acetate Butan-1-ol	DNEL Inhalation mg/m3 960. (a) 480. (c) 1468.
